Project1  
Color Transfer between images

I used two sunset picture described in paper which are:  
This is the input I use for source image

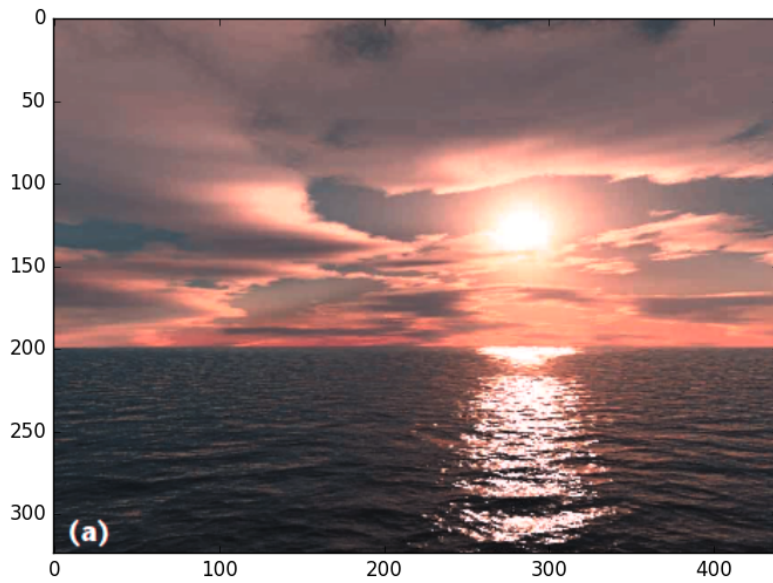

This is input I use for target image

The output will be the picture that shows below

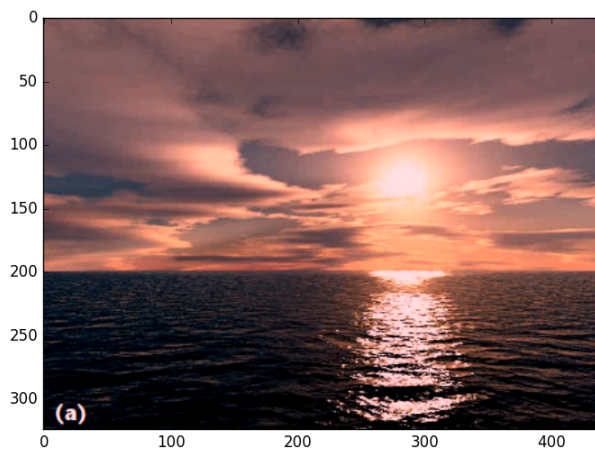

This is the output I have.

This result is based on the algorithm from research paper. I follow exactly the same step on the paper to get the result.

Here is the other two color space result. Both of them are using the same result for the first run.

The first one is RGB channel:

The other luv color space result shows here:
